Rohan Gawande

Full Stack Developer | Next.js · TypeScript · FastAPI · PostgreSQL · LLM-integrated applications

Mumbai, Maharashtra, India | +91-9967653844 | rohangawande2303@gmail.com | linkedin.com/in/rohan-gawande-5821b1145 | github.com/rohangawande2303 | rohan23-portfolio.vercel.app

PROFESSIONAL SUMMARY

Full Stack Developer who builds and ships complete products alone, from requirement gathering and architecture to development, testing, deployment and maintenance. Built a multi-tenant SaaS CRM (FastAPI, PostgreSQL, Next.js, Docker) and delivered 10+ live client projects as a freelancer, including web apps, e-commerce stores and lead-generation websites for real estate, marketing and industrial businesses. Strong in secure backend design, role-based access control, payment and third-party integrations, and responsive UI. Added privacy-first AI features to the CRM (natural-language lead search, summaries, insights, ML lead scoring) with PII redaction, schema-validated LLM output and evaluation test sets.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frontend: Next.js (App Router), React, Tailwind CSS, shadcn/ui, TanStack Query/Table, React Hook Form, Zod, Framer Motion, Recharts

Backend: FastAPI, Node.js, Express.js, Flask, REST APIs, Webhooks, JWT Authentication, NextAuth.js, Pydantic, SQLAlchemy, Alembic

Databases: PostgreSQL (schema-per-tenant, JSONB, indexing), Firebase (Firestore, Auth)

Real-Time and Integrations: WebRTC, Socket.io, WebSockets, Razorpay, Twilio, Nodemailer, OpenFDA API, Zapier/Make

Cloud and DevOps: Docker, Docker Compose, Nginx, Let's Encrypt SSL, Vercel, Render, Neon, GitHub Actions (CI), Dependabot, Git, GitHub, Postman, Linux (VPS)

E-Commerce and CMS: Shopify (Liquid theme customization), Razorpay payments, Firebase, Admin Dashboards

AI / LLM: Gemini API (google-genai SDK), Prompt Engineering, Structured Outputs (JSON Schema, Pydantic), Few-Shot Prompting, Prompt Versioning, LLM Guardrails and Output Validation, Prompt-Injection Defense, PII Redaction, Natural-Language-to-Query, LLM Evaluation (golden test sets), AI Usage Monitoring (latency, tokens, quotas)

Machine Learning: scikit-learn (lead scoring, logistic regression, gradient boosting, explainability), Fuzzy Matching (rapidfuzz)

Concepts: Multi-tenancy, RBAC, System Design Basics, Microservices, Data Modeling, API Security, SDLC, Testing, SEO

PROJECTS

Multi-Tenant Real Estate CRM (SaaS Platform) | Next.js 15, TypeScript, FastAPI, PostgreSQL, Docker | Live Demo | GitHub

Sole developer. Owned the full lifecycle: business requirements, UI/UX design, system architecture, development, testing, deployment.

- Architected a multi-tenant SaaS CRM with schema-per-client PostgreSQL isolation, so each real estate developer's data is fully separated.
- Implemented JWT authentication and a 5-level RBAC hierarchy (Agency, Developer, BD Manager, Sales Executive, Call Center) with project-scoped permissions and middleware-enforced tenant validation that blocks header spoofing.
- Built a webhook integration engine for Google Ads, website forms and Zapier/Make with signature verification, duplicate detection, rate limiting and request logging.
- Designed a hybrid SQL + JSONB data model supporting 150+ lead attributes without schema migrations, plus a standardized 219-column Excel import/export pipeline with validation using Pandas and OpenPyXL.
- Added audit logging (IP, device, browser), activity timelines, and a dashboard with KPI cards and lead-by-status/source charts.
- Built an AI layer (Gemini API) behind a provider-agnostic interface: the model sees only filters, aggregates or redacted text, never lead identities, and all output is schema-validated before use.
- Built natural-language lead search that converts questions into a validated filter query run with role and project scoping, tested on an evaluation set that includes prompt-injection cases.
- Added AI lead summaries, weekly insights with a number-check against hallucination, leads-going-cold alerts and follow-up drafts in English, Hindi and Marathi.
- Built per-tenant ML lead scoring (scikit-learn) with explainable reasons and a rule-based fallback.
- Restricted AI features to managers and above, with daily limits, a per-client switch and a usage log that stores no personal data.

- Dockerized the stack with Docker Compose and deployed it live on Vercel, Render and Neon, with CI via GitHub Actions and Alembic migrations for safe updates.
- Wrote a Pytest suite covering tenant isolation, RBAC, IDOR and security, run on every push through GitHub Actions.

Healthcare Appointment System with Telemedicine | Next.js, Node.js, Express, Flask, PostgreSQL, WebRTC | Live Demo | GitHub

Sole developer (academic project). Built end to end: requirements, database design, backend, frontend, integrations.

- Built Patient, Doctor and Admin dashboards with JWT, bcrypt and role-based access control.
- Implemented appointment booking with real-time slot availability, rescheduling and cancellation, and live queue position via Socket.io/WebSockets.
- Developed peer-to-peer video consultations using WebRTC with a Socket.io signaling server.
- Integrated Razorpay for order creation, payment verification, receipts and refunds.
- Automated SMS (Twilio) and email (Nodemailer) medicine reminders using node-cron.
- Created a separate Python Flask microservice for medicine information via the OpenFDA API.
- Built a verified-review system limited to patients with completed appointments.

CLIENT PROJECTS (FREELANCE)

Yoga Class Booking Web Application | Next.js, TypeScript, Firebase | Live Demo | GitHub

- Designed and built a mobile-app-style booking platform for a client, from user-flow planning to deployment and post-launch improvements.
- Implemented Firebase Authentication and Firestore data models for users, classes and bookings; optimized for mobile and desktop.

E-Commerce Web App for a Maharashtrian Dry-Food Brand | Next.js, Firebase, Razorpay | Live Demo | GitHub

- Delivered a full-stack store for a client: UI/UX for desktop and mobile, product pages, cart and checkout flow, Firebase Auth and product database.
- Integrated Razorpay payments and built an admin dashboard for product and order management.

GOATWEAR Shopify Store | Shopify, Liquid, JavaScript | Live Store

- Built a custom-designed Shopify storefront for an Indian streetwear brand, going beyond the default theme: homepage sections, collections, navigation, product organization and third-party integrations.
- Worked directly with the client on brand identity and requirements; handled testing and launch.

Client Business and Real Estate Websites (6 Live Sites) | Next.js, React, TypeScript, Tailwind CSS

- Independently designed, built, deployed and maintained six live websites for clients, from requirement analysis and UI/UX to responsive development, SEO and lead-capture forms.
- Landmark Aristo: real estate website to showcase properties and capture buyer enquiries.
- SSL Bellagio: real estate website with property presentation and enquiry forms.
- Hubtown Trade Centre: real estate website built to generate leads.
- BeQube: website for a real estate consultancy firm, with lead enquiry forms.
- Social Pulse Agency: multi-page website for a digital marketing agency, with Home, About and dedicated service pages and a lead form.
- KDRMC LLP: business website with lead generation for a cement RMC (ready-mix concrete) plant.

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer | Self-Employed | 2024 – Present

- Delivered 10+ live projects for clients across real estate, e-commerce, food, wellness, digital marketing and construction materials, handling the full cycle independently: requirements, design, development, testing, deployment and maintenance.
- Built and maintained 6 lead-generation websites for real estate, consultancy, marketing and RMC businesses, with enquiry forms, responsive design and SEO.
- Communicated directly with clients to translate business goals into working software, and supported products after launch.
- Deployed and maintained applications on Vercel and VPS servers with Docker, Nginx and SSL.

EDUCATION

Bachelor of Computer Applications (BCA) | 2026
